

# Strategic Inventory Tracking System

## INVENTORY DATABASE

Create comprehensive item master records that include item barcode, location, manufacturing and vendor purchasing data. Get instant visibility into current inventory levels and maintain a complete history of all item movements including receipts, issues, moves, adjustments and physical inventory counts.

## PHYSICAL INVENTORY

Take periodic cycle counts or full physical inventories to update inventory quantities and create detailed variance reports.

## RE-ORDER REPORTING

Set re-order points by item and stockroom location. Produce easy-to-use re-order reports by location and vendor.

The Strategic Inventory Tracking System was designed to make the collection of inventory data faster and more reliable. The system is a comprehensive PC application which utilizes easy-to-use mobile computers to receive, issue, move and adjust an organization's items. The PC software is used by clients nationwide to track inventory in any warehouse, distribution center, store or stockroom. Maintaining accurate inventory levels helps to increase accountability and gives managers visibility into out of stock and overstock situations. Tracking a history of all transactions and the users who perform them gives insight into item usage and worker productivity. Physical inventory reports offer valuable variance information used

- Track the movement of materials by using barcode scanners to receive, move and issue items throughout your enterprise.
- Customize and print item and location barcode labels either from existing data or sequentially using the PC application.
- Take periodic cycle counts or physical inventories by syncing data to mobile scanners used to collect inventory data.
- Create hundreds of reports that can be used to analyze inventory values, re-order points, shrinkage and item locations.

to identify shrinkage in the enterprise. The system also tracks critical serial number, lot number and expiration date values. In addition to improving data accuracy and accountability, using the software can reduce the amount of effort it takes to conduct an audit inventory and perform daily inventory transactions by over 70%, saving both time and money. Organizations such as corporations, government entities, healthcare facilities, and educational institutions use the system to provide current information about the quantity and location of items on hand. If you have a need to track consumable items, the Strategic Tracking System streamlines the process of managing items used by an organization on a daily basis.

# Mobile Barcode Scanner Solution Features

The Strategic Inventory Tracking System is an enterprise solution offering a comprehensive inventory database and a flexible mobile computing application. In addition to being able to scan and read barcode item IDs in the field to update inventory information, the mobile software allows the user to scan or enter stockroom locations and perform physical inventories. At any time, a user can scan an item number to see locations containing that item. The user will be prompted to scan or enter serial numbers, lot numbers or expiration dates if required. A scan history is presented to the mobile user, so they can verify transactions before syncing with the PC. Once synced to the PC, updates are accessed by other system users.

## IMPORT/EXPORT

Import data from legacy systems using easy to use Microsoft® Excel templates. Export any reports to Microsoft® Excel or comma or tab delimited formats.

## FLEXIBLE REPORTING

Report on items by warehouse, location, item type, vendor, or manufacturer. Run re-order, out of stock, and overstock reports. Trace movement of items with transaction history reporting or review quantity variances using the physical inventory reports.

## ADVANCED FEATURES

By assigning specific item types to items in the system, the user can specify that serial numbers, lot numbers or expiration dates be entered each time a user performs a system transaction.

Other administrative features of the system include networking, data back up, import and export of data using Microsoft® Excel, data purge and flexible role based user security.

To get started today, contact Strategic Systems & Technology at 678-389-7200.

## System Requirements

- Windows® XP, 2003 or Vista Operating System for PC Workstations and Servers
- Pentium® IV or Greater Processor, 512 MB RAM, and 1 Gig Free Hard Disk Space
- Microsoft® Active Sync (Windows XP and 2003) or Windows Mobile Device Center (Windows Vista)
- Microsoft® SQL Server 2000 or 2005 (if more than 10 concurrent users)
- Motorola® MC55 or MC75 Mobile Computer with Microsoft® Windows Mobile 5.0 or Greater
