

# StrategicRFID™ Mobile Utility

Finding things just got a whole lot easier.

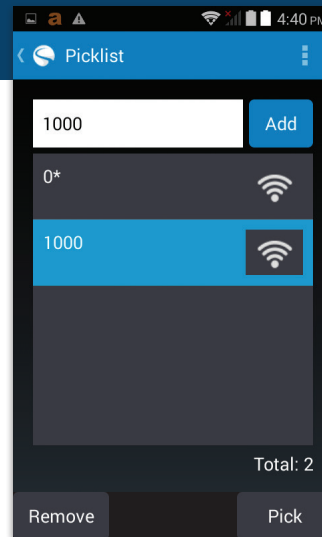

StrategicRFID Mobile is a fully configurable RFID utility that enables you to encode, pick, locate, and conduct a serialized inventory of RFID tags. Designed for use with Alien Technology Android-based handhelds, StrategicRFID Mobile makes tag commissioning and validating easy, giving you powerful on-the-spot capabilities: find lost items, accurately distinguish between visually similar items, identify when inventory is misplaced, and more. It also enables you to explore RFID technology without full-solution infrastructure

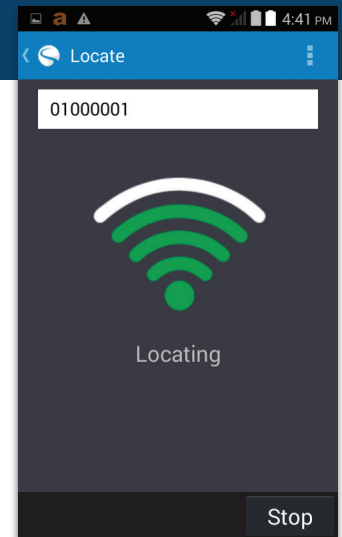

Easily encode RFID tags with your choice of number system.

Read tags and add them to a list. Export the list to Excel.

Add tag IDs to a list. Locate the items and remove them from the list.

Enter a tag ID. Use the geiger-counter function to locate the item.

## StrategicRFID Mobile Utility

- Encode using ASCII, Hex, EPC Global for tag and data flexibility
- Adjust reader strength for focusing on individual tags
- Filtered ID search for easy item location
- Serialized inventory with wildcard search for quickly identifying what you have
- Export to Excel for sharing tag reads with other applications

## Alien ALR-H450 Hardware

- Full QWERTY keyboard for simple data input
- Dual high-power lithium-polymer batteries for all-day use without recharging
- Unique high-performance, high gain antenna for fast tag reads, even from distances
- Quad-core 1.3 GHz CPU for efficient running of Android apps
